# LEAF SPRINGS MEASURING INSTRUMENT

The device is designed for measuring the height and spacing of the gaps of a wagon leaf spring, and can also be used for checking the symmetry of the spring.

| CHARACTERISTICS                        | DATA           | COMPLETE SET TO BE DELIVERED INCLUDE |   |
|--|----------------|--------------------------------------|---|
| Measurement range eye to eye distance  | 1100 - 1400 mm | Instrument                           | 1 |
| Measurement range height of the spring | 160 - 330 mm   |                                      |   |
| Measurement accuracy                   | 1 mm           |                                      |   |
| Weight                                 | 5 kg           |                                      |   |
